Pour le rappeur féru de la féminine, « la mode féminine c'est essayer ». Et pourtant, cet hommage novateur témoigne d'un gros défi, celui de faire sortir une femme, dont les rôles sont jusqu'à présent pensés par la société. Comme ses prédécesseurs, la rappeuse Nahomi, épouse de GRAV, est obnubilée par cette nouveauté et développe un produit intitulé «Vestiaire femme». En vient aussitôt l'interprétation : « Hier, la mode était le voile, aujourd'hui c'est l'accoutrement. Que sera le prochain?», lance l'égérie, entourée d'un bonnet au rabais. Mais une autre préoccupation fait l'objet de cette soirée. Son mari, Nyco, victime d'un handicap physique, a été le premier à l'inclure dans la spécificité de la rappeuse. « Ce qui compte, c'est qu'il y ait une femme parmi d'autres femmes», explique la présidente de STAR Academy, qui assiste à la conférence de presse de l'entreprise de production de musique et de scénarios en noir et blanc. « Je ne vais pas solliciter le féminisme, explique-t-elle. Ici, je vais chercher un portrait de l'humain que d'autres femmes auront à peine vu, que l'humanité et non pas le genre, ailleurs, a vécu. Different selection tools allow you to choose specific pixels of an image. You can use the Rectangular or Quick Selection tool to select areas of an image. The Fuzzy Select or Lasso tools help you create a selection that is more precise or that may be freely be moved around a picture. The Brush tool allows you to paint directly onto an image, a layer, or another. You can paint with color, or you can create patterns or other text effects. The pen tool is a similar tool that lets you draw in the position of the pen itself. You can draw lines, shapes, circles or even hatch patterns. The Gradient tool allows you to create a continuous gradient. You can create light and dark gradients, and you can change the direction of the gradient. The Content-Aware tool can help you fix areas of an image that appear to have problems. It can usually automatically choose a color from the image and then create a replacement that blends in with the rest of the image. It's particularly useful for replacing logos or other elements that look too bright or too dark. The Advanced Healing Brush helps you repair areas of images that are damaged. It can be used to lighten or darken specific areas. Pixels are the building blocks of digital images. When you change a pixel in one part of an image, it's changed throughout the image. Pixel-editing tools let you change these individual pixels. Reducing the number of pixels in an image reduces the size of the image. This increases the efficiency of post-production, but can also reduce quality. If you really want to get down to the pixel level, use Photoshop's Magic Wand tool. It automatically finds areas of an image that are similar, and

turns them into one color. You can then eliminate the parts that don't match. The Levels tool adjusts the brightness and darkness of each individual pixel to the average pixel. It's useful for adjusting the color of an image or creating more punchy images. The Sharpen filter can increase the sharpness of your image. It uses a mathematical formula to determine how many pixels are in the smallest circle that should be in focus. This usually results in a larger circle, which sharpens the image overall. The Shadow/Highlight tool can be used to remove or add shadows in an image. It's often used to clean up picture frames with their light or dark borders.
