Q: Failed to set 'Access-Control-Allow-Origin' header / API can't be cached in browser I have a firebase API server and client. I use an express server to serve both the API and a webpage. I have the express server serves the webpage fine, but when I try to send a request to the API from the webpage, I get the error: XMLHttpRequest cannot load Response to preflight request doesn't pass access control check: No 'Access-Control-Allow-Origin' header is present on the requested resource. Origin " is therefore not allowed access. The response had HTTP status code 403. I know that the problem lies within the API's server security policy, and I found a question where they say to add 'Access-Control-Allow-Origin' to the list of CORS headers. This is my current list of headers: { "Content-Type": "application/json", "Access-Control-Allow-Origin": "*", "Access-Control-Allow-Credentials": true, "Access-Control-Allow-Methods": "GET, POST, OPTIONS", "Access-Control-Allow-Headers": "Content-Type, Access-Control-Allow-Origin, Origin", "Access-Control-Allow-Headers": "Content-Type, Access-Control-Allow-Origin, Origin", "Access-Control-Allow-Networking": true, "Access-Control-Expose-Headers": "X-Rate-Limit, X-Rate-Limit-Remaining", "Access-Control-Max-Age": "1728000", "Access-Control-Allow-Origin": "*", "Content-Encoding": "gzip", "Content-Length": "41612", "X-Rate-Limit": "1000" } The is how I am trying to send the request: `axios.post(data).then(res => { //do something with res.data }).catch(err => { // do`
