What's New In AutoCAD?

Import data from and design drawings to CAD. Automatically convert data (raster images, vector graphics, etc.) into well-formed CAD drawings. The Import Data tool is also able to import information from other CAD systems (GIS,etc.). (video: 1:18 min.) Bring markup into any dimension, to make it look like it was drawn there, simply by specifying the dimensions in the model. (video: 1:40 min.) Hang In: Rapidly draw and export dimensions to multi-sheet assemblies (overlays). (video: 1:28 min.) Visualise your design in any 3D view. There's a preview view to see how your design will look in your 3D model, and you can toggle on and off 3D views from your model, so you can see your model from different angles. (video: 2:15 min.) sheets with room for your components. Each sheet is editable and dynamic. As components are placed on the sheet, their footprints expand to match them. If you try to insert an object that fits onto the sheet, the object snaps to the sheet's dimensions. (video: 1:22 min.) Create multi-sheet assemblies with components of various types. You can create multi-sheet assemblies that contain physical components, components with space for components, and components on separate sheets. You can also create "seamless" multi-sheet assemblies that link multiple sheets together with a single joint, to create a seamless transition between them. (video: 1:48 min.) Reduce the risk of design errors when you're creating complex drawings. This new dimensional feature is particularly useful when working with complex model or sheet assemblies, as it can generate a dimensional component library that will allow you to quickly insert the required dimensions from your model into your drawing. You can also use dimensional components as field variables, and in other drawing operations. (video: 1:37 min.) Bring CAD information to your model. With this new tool you can bring information from other CAD systems such as a GIS, ERP, PLM, etc. into a model or drawing, and you can edit data in the same view as the design, rather than working on a completely separate copy.
