TDP X-Ray Pro (LifeTime) Activation Code Download

Visual disk space administration tool for Windows 7,8, 8.1, 10, 2012, 2011, 2008 and Vista. TDP x-Ray is a useful and reliable visual tool intended for disk space administration. It has been designed to simplify the work with high-capacity data storage containing millions of files. TDP x-Ray displays a clear graph representing the disk image*, from which you can clearly and immediately recognize folders and files occupying the most space. In the graph, you can filter and display selected files meeting specified criteria (the file name or type, time period, in which the respective file was modified or created, a user name). The User Statistics mode allows checking how much space individual users take on a disk. To easily visualize the entire disk space, a special "sunburst" graph is used, which is a round diagram with multiple levels. The graph levels correspond with the structure of the selected disk or folder. The size of specific parts corresponds with the size of the respective file or folder in comparison with the other files on the disk. The largest files and folders take the most space on the screen, which makes them easy to identify. Part colors are selected so that two adjacent colors always differ. Directly from the graph, files or folders can be placed into the thrash bin or removed entirely, opened and viewed in the Explorer or opened in an associated application, or it is possible to view the Properties information window. Any displayed data, which means those that you can see in a graph at a specific moment, can be exported and subsequently reloaded (for example, at a different workstation). You can browse through the imported data graph or you can apply filters on it. You can also work with exported data in a table processing application. Here are some key features of "TDP x Ray Pro": 2 Clear round graph displaying the occupation of the space on a disk 2 Large files or folders can be identify immediately 2 Optimized for large disks with millions of files 2 Graph displaying the size of files / folders or user-based utilization of space [?] Possibility to filter and display in a graph only files with a specific name, date of creation / modification or files created by a specific user [] Easy movement within the folder structure of a disk • immediate information about the occupation of a specific part of a disk ? What's New In TDP X-Ray Pro?

TDP x-Ray analyzes data on disks, folders and users that is stored on a local or network drive. The tool uses a graph to show the user the occupied space on a disk. The meter allows you to select files and folders that you need to examine, it also works with a whole disk. Using the filters, you can display data in a graph only based on the selected search criteria. Users can select their own user folders, and analyze the space that they are occupying. This is a useful tool, which allows you to see the user space on disk in a quick and simple way. Also, you can protect user folders from being deleted. This option allows you to move selected folders into the thrash bin. This protection works only if TDP x-Ray is started with a parameter. The TDP x-Ray will not be available when the folders are moved into the thrash bin. The thrash bin allows you to delete files that have been used for a very long time. It is possible to empty the thrash bin by selecting a single file, press the thrash bin button, then press the OK button. TDP x-Ray supports all Windows operating systems with Windows 7, 8, 10, XP, 2000, 2003, 2008, 2012 and 2016. Hints & Tips: TDP x-Ray Pro can display data from a local or network drive.
