User interface Autodesk AutoCAD has a new look, drawing a number of design awards. Product innovations have enhanced the experience of creating drawings. There are three types of drawing views that can be used to view drawings: Drawings: are made with an external image. Wireframes: consist of overlaid layers, with only one visible layer. Wireframes are used for 2D and 3D drawing, to communicate both design intent and technical issues, such as construction constraints. They are used for collaboration between architects, engineers and contractors. Wireframes can be viewed in the same way as drawings. Design and dimensioning: used for creating the appearance of a 3D environment. This is used in collaboration with dimensioning data. It can be viewed in the same way as drawings and wireframes. The AutoCAD Editor is the primary interface for 3D objects in a 2D environment. The Editor is used to create, edit and view all 3D objects, except for 3D polyline, which must be created and edited in the 3D Modeler. The AutoCAD Editor has the following modes: Drawing mode: 2D workplane to which 3D objects are added. The system cursor is in the middle of the drawing screen and can be moved in the x and y direction. There are two buttons on the drawing screen to switch between 2D and 3D workplanes. The 2D workplane is the current workplane and can be switched by pressing the arrow keys. The system cursor is in the middle of the screen and can be moved in the x and y direction. 2D views are used for creating and editing 2D objects and are the primary view of a 2D drawing. The switch between 2D and 3D views can be done by pressing the right mouse button and the left mouse button. 3D mode: a 3D workplane. The 3D workplane can be switched by pressing the Tab key.
