Q: Trouble Decrypting AES encrypted text I am trying to encrypt a string using AES in C#. So

far I have generated a 256bit key and the text to be encrypted. After encrypting this text, I cannot decrypt the result. I am certain that I am doing something wrong but can't figure out what. Thanks for any help. A: You are doing

nothing wrong - AES 128 is simply not strong enough in combination with a high number of characters per block to actually be secure. You can use C# to encrypt and decrypt using CBC

Selective inhibition of the ADP/ATP translocase by antiproliferative drugs. The adenosine 5'-diphosphate (ADP)/adenosine 5'-triphosphate (ATP) translocase is an integral

---

membrane protein that is necessary to exchange ADP and ATP between the cytoplasm and the mitochondrial matrix. The translocase is inhibited by the mitochondrial toxins Aralar and oligomycin. We demonstrate that the

---

antimitotic drug colchicine is another inhibitor of the translocase. We further show that antiproliferative drugs, vinblastine and nocodazole, selectively inhibit the ADP/ATP translocase. Since the biochemical effects of

---

these drugs have been shown to be related to the inhibition of cellular microtubules, we propose that the inhibition of the ADP/ATP translocase contributes to the efficacy of these drugs. Q: Can we use three.js for a 2d game?

---

I'm currently working on a 2D 3D game in which each platform appears separately in the 3d space. From my understanding, three.js does not really support 2d games and the easiest way to develop games would be to just use html and javascript

---

using their canvas element.  
Is it possible to use three.js  
for a 2d game? If so, can  
anyone give me an idea how  
to best do so? A: three.js  
was originally developed by  
a team at Epic Games to  
run Unreal Engine 3. 3D  
Engine, game engine's

---

focus. The three.js project was initially aiming to build a renderer for WebGL that used an STL file format. But it evolved, and is now considered a complete library, making it possible to make 3D games directly in the browser. It's very

---

possible to make 2D games directly in browser. You'll find information on how to do so in the [three.js](#) wiki (if you can see it, of course ;-)

From the [three.js](#) wiki,

While it is possible to make 2D games using WebGL and CSS Transforms 3D and

---

a few JS shaders, such a solution is infeasible for two reasons: The lack of immediate mode requires multiple rendering passes. The lack of immediate mode means that some CSS transforms are not applicable (e.g., translating

**What's New in the?**

Today, we're excited to announce the upcoming release of the C# 6.0 preview SDK, available to download now. This SDK represents the first release

---

of the features that are currently in-progress at the C# language level, and you can expect to see further language features added to the C# 6.0 specification in the coming months. As you may know, we were charged by the C# language

---

team to find ways to make C# as fast as possible. This is pretty awesome, and I'm happy to see the outcome of that effort. We've made significant progress, and the preview SDK is a very solid stepping stone, showing how much we can do with

---

the language today. The preview SDK is optimized for Xamarin,.NET Core and.NET Standard. When we talk about performance, we're talking about the performance of the existing C# language features, and we've focused on them for

---

this preview. With the exception of a few high priority features, we've intentionally left out some other features that have a lower priority but are more likely to make it into the final C# 6.0 version. This will let us focus on those

---

features early in the cycle and more quickly deliver the performance benefits they bring. Here's a quick summary of the areas that have been improved:

JavaScript interop has been reworked to use type inference to enable them to

---

share code between  
JavaScript and C# Code  
formatting and refactoring  
has been reworked, and  
we've added the ability to  
extract a JSON response as  
a static method to simplify  
async programming Type  
inference has been

---

overhauled to enable performance improvements and to use fewer allocations, and we've added an iteration overload for an object or array that enables more efficient iteration over LINQ queries and local collections We've

---

added support for nullable types and objects in F#, which enables a lot of improvements in the F# data structures and patterns. Dynamic variable and named arguments have been added, allowing us to use dynamic typing for

---

more situations where it's helpful, as well as for readability improvements in some cases Expression trees have been added to enable new internal optimizations, enabling better performance of C# when parsing expressions Multi-

---

targeting support has been improved for running a single project against multiple target frameworks and runtime environments, simplifying the development process when targeting multiple
